

## Tropical Village Pack

This package consists of a selection of

- simple Huts: Hut, A, B, and C, plus mirrored versions of Hut A & B, thereby giving you five different hut designs (as the window location varies in each hut)
- a colonial administration building, which includes optional flag (Japan and France, plus a blank flag and a blank flagpole, should you wish to use a paper flag) and an alternate sign which comes with paper print outs in English and French language
- a corrugated steel supply hut – this building has a sign board by the front door; there are files to print a sign to cut and glue to this panel in both English and French (assuming that if taken over by the Japanese they would have simply left the original sign up, given the fairly short stay they had (early 1942 – 1945)

Each building comes with

- the building
- the roof
- an optional wood floor
- an optional raised stilt base to raise the building off the ground
- stairs for use with raised floor
- the simple residential huts have optional doors which can be added if desired.

# Supply Depot

# Colonial Administration Bldg.

## Assembly

If choosing the raised base for the buildings, you may choose to finish the base before gluing on the floor.

When assembling the Colonial Administration building please note the floor extends toward the building front, to allow assembly with the covered porch roof and stairs. Always test fit before gluing

## Printing

The test prints in the photos were printed at .3mm with full supports. Remove supports with care. Test fit before gluing.

### The IJA bunker

This package consists of a bunker base and the roof. The test prints were made at .3mm with supports.

A mirrored copy allows you to print two models of this for some variation.

The roof is meant to be left free (e.g. not glued) and will span on the assembly nubs of the bunker base.

### The Indochina Blockhouse

This model has the following parts

- the base section
- the second story section
- the top floor
- the roof with two roof support braces

Print with full supports.

Clean the support material carefully. Always test fit before gluing.

When assembling the upper floor support braces note the beveled top edge goes on the inside; and these braces slid into the roof (do not glue the roof on as this would impede placing figures in the roof platform).
